## Conference folding table type T

### Description

Frame made of a metal pipe with a diameter of 35 mm powder coated in metallic, black or other color on request.

Countertop color to choose from the color card  
The countertop is made of melamine resin with a thickness of 18mm, also thickened and strengthened with a melamine resin frame with a thickness of 18mm and a width of about 10 cm (36mm of thickness in total).

Conference folding table type T is available in three different shapes: A - rectangle; B - semicircle; C - trapeze.

Tables longer than 140cm are additionally equipped by a metal profile which prevents the table from bending under the weight. Countertops can also be made of melamine resin with a thickness of 25 mm (Recommended especially for shape B and C).

Tables can be stacked one over the other without the risk of scratching the countertops.

For folding tables we recommend trolleys of the corresponding size for easy storage and transport of up to 10 pieces of tables simultaneously.
